

TAP Charge™ Capture

Paper based billing systems require manual data collection by multiple staff members and result in lost charge slips and billing delays. Often poorly designed manual systems result in misplaced notes, erroneous billing and noncompliant charges.

TAP assists physicians by capturing billable charges at the point of care. TAP eliminates the traditional, labor intensive and error prone billing processes by automating how physicians identify and capture procedure and diagnose codes during patient encounters. TAP fully integrates charges with the physician's unique billing system, thus optimizing payment cycles.

Inpatient, Outpatient, Every Patient

Increase Collections

Every physician practice using TAP has seen significant improvements to the bottom line. Some practices have seen as much as a 24% increase in collections by installing TAP. TAP ensures that a charge is captured for every patient encounter, and identifies omissions when they occur.

Improve Cash Flow

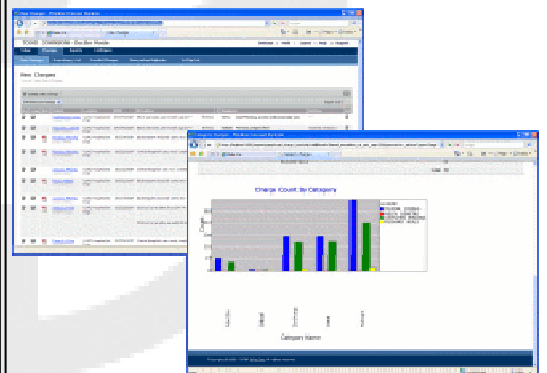

Because charges are captured electronically and in real-time, information flows directly to payers. There is no need to manually collect charges, direct them to the billing department only to enter them by hand and submit claims.

Compliant Charges Every Time

Best of all, TAP can integrate directly with TeamNotes to provide a seamless link between physician documentation and billing. Imagine that each time an encounter note is signed, a compliant CPT code and supporting ICD-9 codes are extracted from the documentation and sent to billing. Physician practices can be assured that every charge is supported by documentation and that no encounter goes unbilled.

Features

- Rounding lists and scheduling lists provide a fast way to confirm that every patient bill is completed each day
- Customizable edits ensure that bills are sent out clean
- Robust reporting allows managers to review charge-capture activities by day, physician, group or patient
- Quickly search patient lists by name, medical record number or location
- Efficiently share diagnoses among physicians
- Maintain a personalized patient list
- Easily create or update patient encounters
- Effortlessly choose diagnosis codes from the ICD9 hierarchy
