

# TAP Charge Capture™

**Capture Patient Billing. On Time.**

Salar's TAP Charge Capture application completes billing charges at the point-of-care.

TAP eliminates traditional, labor-intensive and error-prone billing processes by automating billing from the physician's documentation. TAP sends charges to the back-end billing systems, increasing efficiency and enhancing revenue.

## Increase Collections

- ▶ We have found that every physician practice using TAP has significantly improved their bottom line, as much as 24%. TAP ensures that a charge is captured for every patient visit and identifies omissions as they occur.

## Improve Cash Flow

- ▶ Charges are captured electronically in real-time and information flows directly to payers, eliminating the need to manually collect charges, shuffle them to the billing department and enter them by hand.

## Capture Compliant Charges Every Time

- ▶ TAP integrates directly with TeamNotes™ to provide a seamless link between physician documentation and billing. Each time an encounter note is signed, the compliant CPT code and supporting ICD codes are sent to the billing system. Physicians and billing staff can be assured that every charge is supported by documentation and no encounter goes unbilled.

## Features

- ▶ Access a secure, user-friendly, web-based interface to quickly select patients and record charges
- ▶ Easily create or update patient encounters
- ▶ Confirm daily completion of patient bills with rounding and scheduling lists
- ▶ Review charge capture activities by day, physician, group or patient using a robust reporting tool
- ▶ Quick patient search sorts by name, medical record number or location
- ▶ Effortlessly choose diagnosis codes from the ICD hierarchy
