

Technology Overview

Caught Behind the Physician Adoption Curve?

Salar specializes in advanced inpatient clinical documentation that saves time and makes life easier - for end users and hospital IT leaders. Your organization can achieve higher rates of physician adoption by deploying solutions that are more flexible and user-friendly than anything else on the market. Salar's customizable and scalable technology platform integrates easily with your existing HIS to create a streamlined documentation and billing workflow.

Salar Technology Platform Features:

- ▶ *Point-of-Care Flexibility* - Salar's Products can accommodate end users via Web browsers, desktop PC's, or tablets
- ▶ *Onsite Servers* - Microsoft Servers with SQL Server are installed onsite behind your firewall and support virtualized environments
- ▶ *HL7-Compliant EMR Data Integration* - Notes, Problem Lists, Physician Charges and other outbound data, as well as inbound data such as ADT, laboratory results, pharmacy information and test results, are transmitted via HL7 2.x and CDA standards-compliant interfaces
- ▶ *Secure Physician Practice Billing* - Notes, CPT and ICD codes and other billing data are transmitted securely to third-party physician practice billing systems
- ▶ *Multiple Data Formats* - Notes are captured as structured data and can be formatted as CDA/CCD documents, and can also be available in the EMR as PDF files or text documents
- ▶ *SSO Compatible* - Salar solutions can be accessed with patient context and user context single sign-on in many EMRs
